Unmanned System Solutions

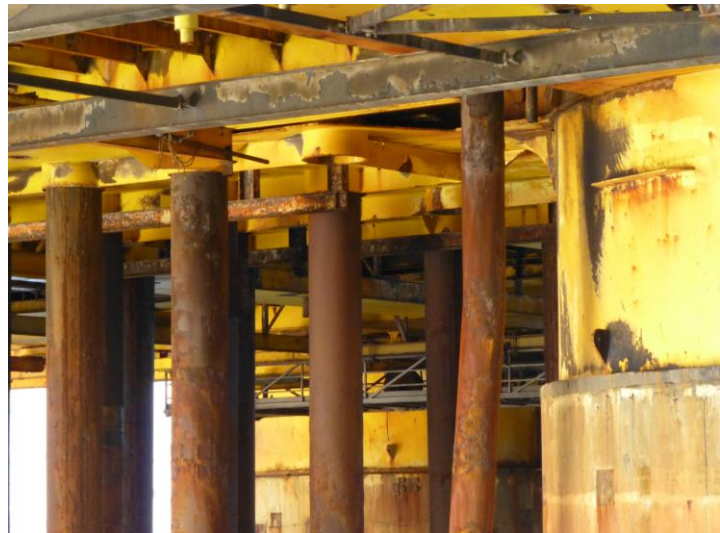

Sky-Futures and OTI deliver a safe, experienced and cost effective oil and gas inspection service using unmanned aerial vehicles (UAV) on and offshore. We provide HD and thermal imagery and technical reports written by industry experts in flare systems and structural engineers.

Our highly experienced UAV teams work with your technicians on site to ensure that all the data required is captured. Working together ensures that we deliver an efficient service aligned to your requirements. Our UAV inspection teams provide ad hoc, annual, routine and emergency inspections of your assets.

Our offshore inspection service is proven in winds of 21+ knots (43+ km/h). The service provide an inspection service that is:

- **Safe**
- **Cost effective**
- **Fast**

Sky-Futures and OTI deliver remote general visual inspections of hard to access items such as:

- Live flare systems
- Under deck
- Over side structural inspections

We also provide DTL-VU remote measurement software for corrosion and defect measurement and monitoring.
